

Mercedes-Benz A-Class – Road Test

Published: March 8, 2019 Author: David Miles Online version: https://www.wheels-alive.co.uk/mercedes-benz-a-class-road-test/

hatchbacks and four door saloons. Over 340,000 have been sold since the first generation arrived in the UK in 1997.

Last year a record 43,527 of them were sold in the UK, making it the UK's eighth best

selling model range and this year it has moved up the top ten sales chart to fourth position. Competitor premium brand models are the BMW 1 Series and Audi A3, neither of which feature in the top ten sales chart. The Mercedes-Benz brand in the last two years has moved to become the best-selling German premium brand in the UK. Last year they sold 172,238 new cars here, driven by demand for A-Class and C-Class ranges, the majority going to business user-chooser and fleet customers.

A-Class Hatchback prices start from £26,025 and rise to £35,580 through 20 derivatives. The less popular four door saloon models with six derivatives are priced from £28,120 to £31,760. To meet the demands of the many rungs on the company car ladder there is a comprehensive array of engine choices, spec levels and of course extra cost option packs.

Engine/powertrain choices for the main-selling hatchback models are A 180d 1.5 litre, four cylinder turbodiesel with 116 bhp and a seven speed auto transmission, A 200d four cylinder turbodiesel offering 150 or 190 bhp outputs, both with the seven speed auto gearbox, A 180 1.33 litre four cylinder turbo petrol with 136 bhp with six speed manual and seven speed auto choices, A 200 1.33 litre four cylinder 163 bhp manual and auto and a series of 2.0 litre four cylinder turbo petrol units, all with auto gearboxes, which are the A 220 190 bhp, A 250 224 bhp and the AMG A 35 4MATIC 306 bhp motor.

The core specification levels for hatchbacks, depending on diesel engine choice, are SE, Sport and AMG Line, and petrol are AMG Line and the full-blown AMG A 35.

For the A-Class saloons the engine choices are A 180d and petrol A 200, A 220 and A 250. Spec levels are Sport and AMG Line, again depending on the engine choice.

Mercedes-Benz UK indicates that 335,000 A-Classes have been sold in the UK since the first generation was introduced in 1997. The AMG Line spec level is the most popular, accounting for almost half of UK sales, 55% of customers order a model with an automatic transmission, 70% sold are diesel powered models and the UK is the largest global market for A-Class sales.

Whereas the first generation 'Baby Merc' A-Class was a tall, narrow track, short coupled hatchback, which initially had dubious handling qualities until an electronic stability programme was added, the progression of generations has seen the model become better styled, better balanced and roomier. Now again the progression continues and the line-up now includes the latest technologies in terms of safety, driving support, MBUX (Mercedes-Benz User Experience) connectivity and even elements ready for semi autonomous driving.

The new version is larger again at 4,419 mm (14.50 ft) in length, an increase of 120 mm (4.72 in). It's wider, taller with a 30 mm (1.18 in) longer wheelbase, larger boot/load area but its 20 kg (44 lb) lighter. All versions have a McPherson strut front suspension with the A180d and A 200 having the cheaper torsion beam rear system, whilst more powerful and expensive versions have the more sophisticated – and providing better handling and ride comfort – four-link system. Even standard models have a 15 mm (0.59 in) lowered 'comfort' suspension but it still has springs and dampers configured for sportier handling characteristics.

In common with many brands offering models of different sizes there is a continuity of design from front to rear of their small medium, large and sporting saloons, hatchbacks and estates. The A-Class is no different. It has the latest Mercedes front face with the iconic three pointed star centrally positioned in the wide grille. The frontal image is strong, it's distinctive and you just know at a glance it's a Merc. With its lowered suspension the body from any angle looks 'well planted' giving the A-Class a sporting look whatever engine is under the bonnet and whatever spec level it might be. It portrays the image for an owner that 'I drive a Merc' which for the bragging rights in the company car sector is important. For retail customers the Merc brand says a lot as well whether they are aspiring to buying a Merc for the first time or whether they are down-sizing from larger models.

I have just had a spell in one of the more lowly variants of the A-Class range – the five door Hatchback 180d turbodiesel with its standard seven speed automatic transmission with Sport specification – the likely starting level for a youthful company car driver. The on-theroad price is £27,565 and with those all important diesel lower CO2 emissions the Benefitin-Kind tax rate 27%, but as an early warning all BiK tax rates change from 1 April and this model goes up to 30%. Writing about costs, the CO2 111 g/km figure for this engine means VED First Year diesel rate road tax currently costs £205 and then £140 Standard rate. From April that changes to £170 First Year rate and then £145 Standard rate.

The 118d model has a 1.5 litre, four cylinder turbodiesel 116 bhp engine. The core unit is sourced from Renault-Nissan but Mercedes add their ECU electronics to harmonise it with

their performance requirements. This unit develops 260 Nm (192 lb.ft) of torque from 1,750 rpm and drive to the front wheels is through a seven speed twin clutch auto gearbox.

Performance-wise this unit, although relatively smooth and quiet, isn't exactly going to 'cutthe-mustard' when it comes to company execs bragging rights, given it's a Merc – even a small one. Top speed is 125 mph and the zero to 62 mph acceleration time is a modest time, compared to other engine options, of 10.5 seconds. Still it's fuel frugal, with the new Combined Cycle official WLTP figure of 61.4 mpg. In real-life driving conditions my week long test driving returned 51.7 mpg, somewhat shy of the official figure.

The combination of good torque and the seven speed smooth-changing auto gearbox with its

manual sequential mode actually work well. The fully auto mode works smoothly and is ideal given our traffic congested roads, and the manual sequential shift mode will add sparkle for open road driving. I wasn't so keen on the stalk style gear selector being mounted on the steering column. So whether it's high mileage users on their daily work travels or an older empty-nester out for a shopping trip or off on holiday, it will fit for purpose, functional rather than fun but motoring in some style.

Ride comfort is generally good despite the lowered suspension, but the torsion beam rear axle and 17-inch alloy wheels do provide a fidgety ride over poorer tarmac surfaces. In addition, ridges in the motorway surfaces caused by heavy lorries can provide at times rear end steering as the wheels try to follow the tracks rather than the car's front wheel drive intended line. Front end grip and accurate steering lines are good in keeping with its Sport spec classification. Overall it's a well-balanced car – not an exciting one, but it's a starting point Merc!

So what's it like for specification? Well the base SE variant includes 16-inch wheels, active brake assist, active lane keep assist, driving mode selection twin 7-inch instrument and touchscreen displays, air con, cruise control, DAB radio, Bluetooth, keyless go, MBUX multimedia system. What the Sport spec adds is 17-inch wheels, LED performance headlights, Artico man-made leather and fabric upholstery, dark carbon fibre effect trim, sat-nav and two zone air con. It is very 'switch heavy', unlike many competitors which have gone the 'minimalistic' route with their controls. It was good to have separate heating and ventilation controls but some of the other switches were small in size and fiddly to use. It took a while to familiarise myself with the multitude of buttons and controls especially those on the steering wheel.

That said the interior of the A-Class Sport spec test car was generally a nice place to be.

VERDICT

This Mercedes has all the styling hallmarks of larger and posher models from the company, although the manmade leather didn't feel a premium brand product. But as I've already written it's a starting point Merc.

For: Classy premium brand ownership proposition, good looks with desirable kerb appeal, high levels of technology either as standard or via extra cost options, huge range of models to choose from, pleasant to drive.

Against: Gets expensive if lots of options are added, mediocre engine performance, unsettled rear end handling at times, compact space in the rear seats, some fiddly controls and switches, non premium brand quality manmade leather upholstery.

Milestones and Wheels-Alive Tech. Spec. in Brief: Mercedes-Benz A 180d Sport, five door hatchback.

Price: £27,565.

Engine/transmission: 1.5 litre, four cylinder, EU 6.2 compliant, turbodiesel, 116 bhp, 260 Nm (192 lb.ft) of torque from 1,750 rpm, seven speed dual clutch automatic with manual sequential mode.

Performance: 125 mph, 0-62 mph 10.5 seconds.

Fuel consumption: Combined Cycle 61.4 mpg (51.7 mpg on test).

Emissions and taxation: CO2 111 g/km, VED diesel rate road tax \pm 205/ \pm 140, BiK company car tax 27%.

Insurance Group: 18E.

Warranty: Three years/unlimited mileage.

Dimensions/capacities: L 4,419 mm (14.50 ft), W 1,796 mm (5.89 ft), H 1,440 mm (4.72 ft), wheelbase 2,729 mm (8.95 ft), boot/load space 370 to 1,200 litres (13.07 to 42.38 cu.ft), braked towing weight 1,400 kg (3,086 lb), five doors; four/five seats.
